

mr.graph

a math learning tool for the future
on Hololens 2

DUBHACKS

Problem Statement

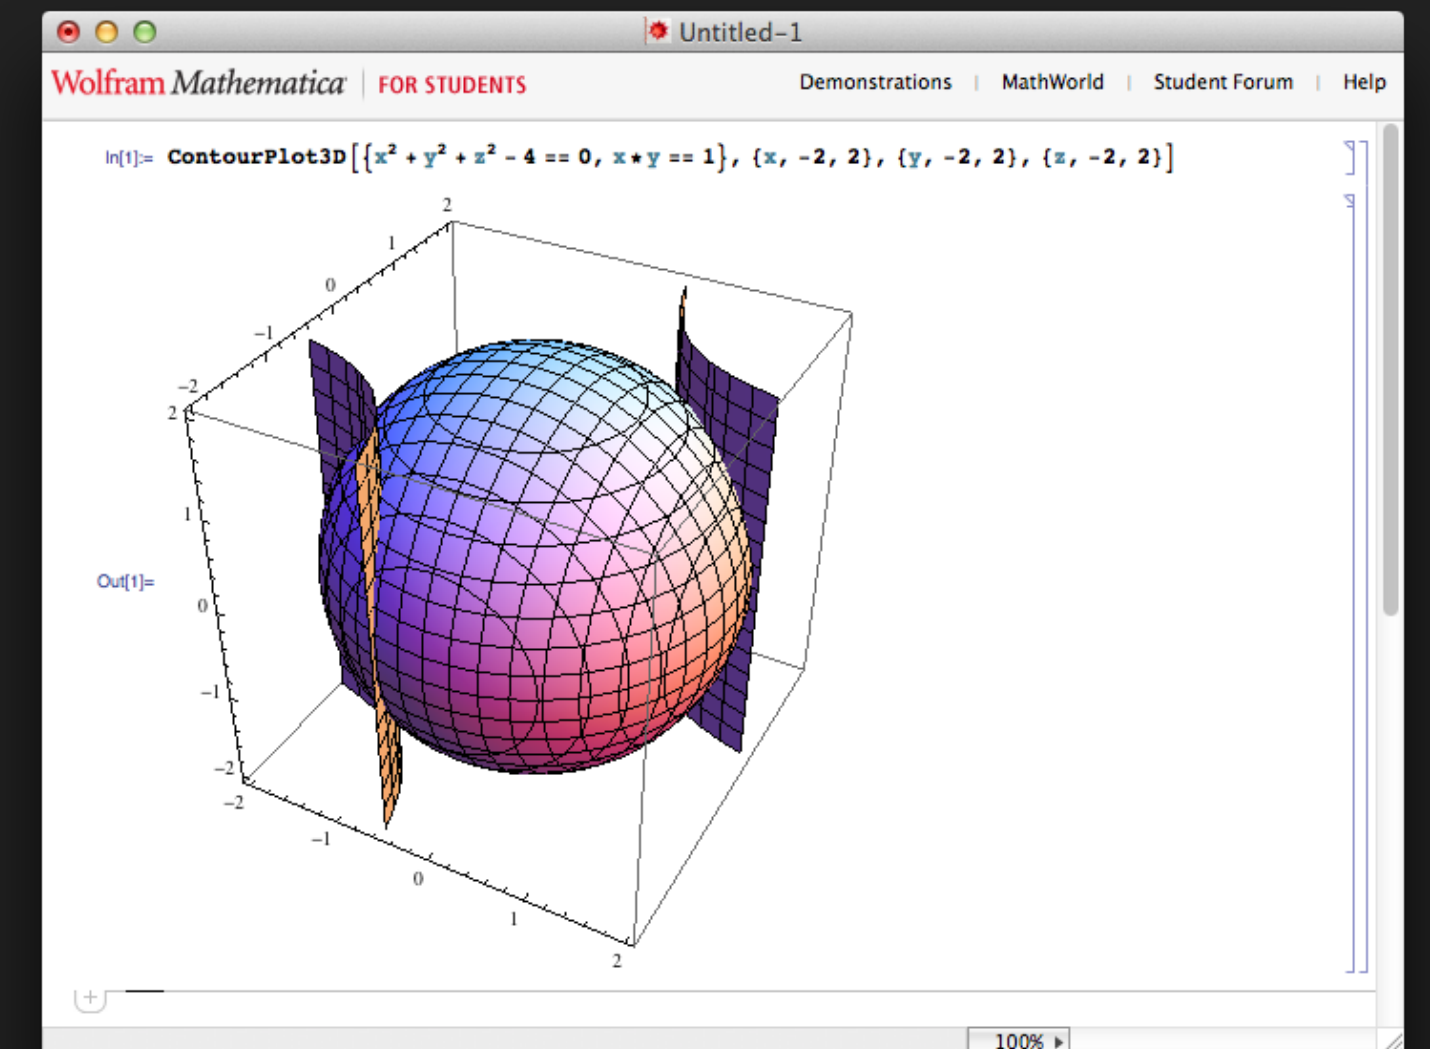

How might we allow teachers and students to better visualize and understand complex math equations?

Research

Existing math visualization solutions include online graphing tools such as Wolfram Alpha and GeoGebra. However, they fall short in interactivity and ease of use. Studies have shown that the incorporation of interactive learning technologies help students, including disabled students, learn better.

Design Requirements

Interactive

Users are able to explore visualizations in a meaningful way

Engaging

Users are encouraged to interact, it should be fun!

Ease of use

Controls and UI are intuitive and accessible for users of all abilities

Ideation

The technology that drove our ideation was Microsoft's Hololens 2. We wanted to utilize this device because of the inherent interactivity which comes with mixed reality and precise controls it affords.

We considered different ways of inputting and visualizing equations, and ultimately settled on converting handwritten equations into 3D graphs which can be manipulated.

Our Solution

mr.graph

DUBHACKS

How It Works

1. Write a math equation you would like to graph
2. Look at it through the Hololens 2
3. Set the bounding box around the equation and press 'Submit'
4. See and interact with the generated graph

Next Steps

- Implement support for long distance collaboration and ability for multiple users to view the same graph
- Tooltips on the graph to show details about the graph such as extrema
- Implement ability to view multiple graphs overlayed simultaneously and details about their intersection

Thank you!
